Introduction

Spectroscopy Europe and *Spectroscopy World* are purely digital magazines, published eight times a year. *Spectroscopy Europe's* circulation includes Europe and the Middle East, *Spectroscopy World* covers the rest of the World. With both Europe and World Editions, you can reach a global audience of readers in excess of 27,000 interested and active in spectroscopy and related techniques.

Digital publication frees us to publish issues more regularly and to include more valuable content. There are also not insignificant advantages for the environment, as well as savings for advertisers. Each issue contains a section listing all companies in the 2022 Directory under major spectroscopy technique groupings. Logos and short contact information including active links are included. This further helps to keep your company in front of potential customers.

spectroscopyeurope.com is the website for both European and World audiences and is home to the Directory.
